

1

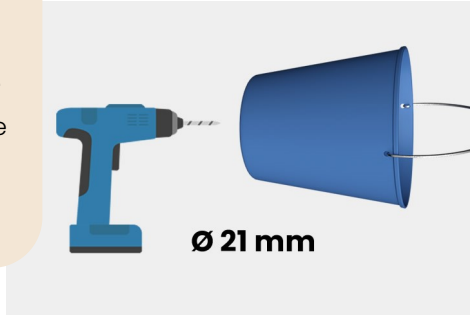
How Drop works

Choose your desired bucket, canister, or other container for the Drop handwashing station.

2

Drill a hole in the bottom of the container

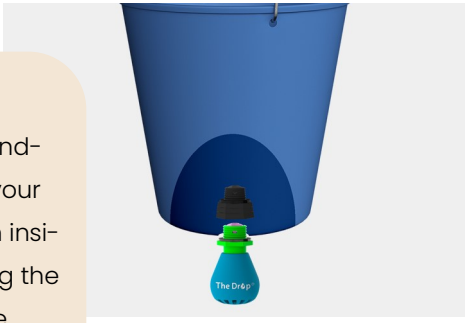
Drill a 21 mm diameter hole in the bottom or lower side of the container for the Drop.



3

Secure the Drop

Tighten the Drop hand-washing station to your container from both inside and outside using the parts included in the package.



4

Hang and fill the container with water

Finally, you can hang your container, for example, from a hanging basket hook, and fill it with water. The Drop dispenses water for handwashing when gently pressed upwards.
