OSLO PEDESTAL PLACEMENT GUIDE

Top Rear of Pedestal Against Wall

*Fold along line

- Before installing bracket, double check placement as pedestal is handmade with slight variation
- If using 250mm chute, the brackets will need to be trimmed to size shown on this guide
- Screw floor fasteners through the centreline of the floor bracket

Installation Instructions

Verify Guides Scaling: Measure the length and width of the guide to ensure it is correctly scaled. If the dimensions vary by more than +/- 2mm, replace the guide. This guide represents the minimum clearance required from the wall.
Position Guide: Place the guide on the floor in the desired location. Position the pedestal on top of the guide and confirm that the location is suitable.
Secure Guide: Pin or tape the guide to the floor, then carefully remove the pedestal. Making sure the dotted line circle is lined up with the inner hole of the pedestal.
Cut the Hole: Cut out the hole using the 250mm circle for the 250mm chute or the 200mm circle for the 200mm pipe. If you cannot cut with the guide in place, scribe through the guide to mark the floor or cut out the circle from the template and use this.
Check Fit: Insert the 250mm chute/ 200mm Pipe to verify that it fits into the hole.
