CF 8

Trusted, easy-to-use solution for clean, odor-free bathrooms

Waterless Toilet Shop

Discover waterless sanitation with the CF series. The CF 8 features a sophisticated split-system design that combines a stylish porcelain toilet with a discreet underfloor waste management unit, delivering the comfort and appearance of a conventional toilet without the need for water, electricity, or complex infrastructure.
Designed to blend seamlessly into modern bathrooms, the CF 8 maintains a fresh, odor-free environment while providing a clean and comfortable user experience. Its elegant porcelain pedestal complements contemporary interiors, making it an ideal solution for tiny homes, cabins, holiday properties, eco-homes, and other off-grid living spaces.
Built for long-term reliability, the CF 8 requires minimal maintenance and offers a practical alternative to traditional sanitation systems. With no flushing required and only occasional servicing, it provides a convenient, low-maintenance solution without compromising on comfort, appearance, or performance.
The CF 8 supports up to four full-time users, making it a dependable choice for households seeking a premium waterless toilet system with modern styling and proven reliability.

- 18" Below clearance required
- Single composting container
- Shipping from Nevada
- Certified to AS/NZS 1546.2

HOW THE CF 8 WATERLESS TOILET WORKS

1. Waste Collection
Waste is collected in a large external chamber connected to the toilet, providing a practical and efficient waste management solution without the need for water or flushing.

2. Natural Airflow
A simple ventilation system helps maintain a fresh, odor-free bathroom environment while supporting the natural treatment process inside the unit.

3. Low-Maintenance Operation
The CF 8 is designed for straightforward operation & minimal maintenance. Adding a carbon material such as hemp or pine shavings periodically helps keep the system performing efficiently.

4. Easy Servicing
The CF 8 is designed for convenient access and simple maintenance. Waste gradually breaks down within the chamber, allowing material to be removed from the front access hatch when required, reducing handling and making long-term upkeep easy.
